RE: Approval of direct applied Envirocoat and Ultrakote one-coat basecoat to EF Block.

Conclusion:

Ultrakote Products Inc. has conducted comprehensive adhesion testing of Envirocoat and Ultrakote one-coat applied directly to EF Block. The definitive conclusion was that Envirocoat and Ultrakote one-coat can be successfully applied directly to EF Block without the use of a woven wire stucco netting. The use of an acrylic boning agent is required as a surface preparation. As a result, Ultrakote Products can provide warranties (type and length of warranty will vary with system used) against delamination, moisture penetration, and non structural cracking.

In closing, Ultrakote Products Inc. acknowledges EF Block as a state of the art wall assembly fully compatible with state of the art stucco systems, providing the highest Environmental and Economic benefits available in the industry.

If you have any further inquiries regarding this matter please feel free to contact me.
